SELLVION

Understand Every Customer. Take the Next Best Action. Grow Every Business.

An autonomous AI employee for small merchants in India.

Problem Statement

India's e-commerce businesses face a major challenge: 20–30% of Cash-on-Delivery (COD) orders fail and return to origin (RTO), compared to just 2–3% of prepaid orders. (Sources: Dazeinfo, Upstox)

Note: The COD figures refer to online orders in India, not all merchant transactions.

Beyond failed COD deliveries, small merchants face several challenges:

- **Lost Customers:** Difficulty identifying regular customers who have stopped purchasing.
- **Missed Reorders:** No clear visibility into customers who are due for their next purchase.
- **Scattered Records:** Customer details, purchase histories and udhaar records are spread across notebooks and different systems.
- **Manual Follow-ups:** Reminders and payment collection require constant effort.
- **Limited Customer Insights:** Merchants struggle to understand buying patterns and customer needs.
- **Untracked Results:** No clear way to measure which actions bring customers back and generate additional sales.

The Core Problem: Small merchants lack an intelligent system that turns customer information into timely actions and measurable business growth.

Proposed Solution – SELLVION

SELLVION is an autonomous AI employee that understands customer behaviour, identifies business opportunities and takes intelligent actions to increase sales and customer retention.

- **Customer Intelligence:** Builds customer profiles using available purchase histories, orders, preferences and business records.
- **Behaviour Analysis:** Identifies inactive customers, regular buyers and changing purchasing patterns.
- **Smart Predictions:** Detects reorder opportunities, outstanding udhaar and potential COD risks.
- **Multi-Agent AI Architecture:** An Orchestrator Agent coordinates specialised AI agents for customer analysis, decision-making and execution.
- **Automated Engagement:** Creates personalised Hinglish WhatsApp messages, reorder reminders and payment follow-ups.
- **Earned Autonomy:** Starts with merchant approval and gradually automates repeatedly approved actions within merchant-defined limits.
- **Revenue Measurement:** Tracks customer responses, repeat purchases and estimates additional revenue through a control-group approach.

Technology / Tech Stack Used

Layer	Technology	Purpose
Frontend	Next.js + Tailwind CSS	Complete merchant website and dashboard
Backend	Python + FastAPI	Connects the website, database and AI
AI Orchestration	LangGraph	Coordinates multiple AI agents
Agent Framework	LangChain	Connects LLMs, tools and retrievers
Primary AI Model	Gemini API (free-tier model)	Reasoning and personalised communication
Local AI	Ollama + Llama	Local LLM inference without API charges
Knowledge Graph	Neo4j AuraDB Free	Represents customer, product and purchase relationships
GraphRAG	Neo4j GraphRAG	Retrieves connected customer information
Predictive AI	Scikit-learn + XGBoost	Churn, reorder and COD risk prediction
Customer Analytics	Pandas + NumPy	RFM analysis and purchasing patterns
Embeddings	Sentence Transformers	Converts customer information into vectors
Vector Search	pgvector	Semantic customer memory retrieval
Database	Supabase PostgreSQL	Stores customers, orders and action history
Agent Monitoring	Langfuse (self-hosted)	Tracks agent execution and performance
Workflow Visualisation	LangGraph Studio	Visualises agent nodes and execution flows

USP – Uniqueness of Approach & Solution

How SELLVION compares with existing platforms:

SELLVION's unique positioning: One AI teammate connecting customer intelligence, predictive decisions, autonomous actions and measurable revenue outcomes.

Impact & Benefits

- **Revenue Growth:** Recover missed sales and increase repeat purchases.
- **Customer Retention:** Bring inactive customers back.
- **COD Risk Reduction:** Identify risky orders and prevent avoidable returns.
- **Faster Collections:** Simplify udhaar tracking and payment reminders.
- **Higher Productivity:** Reduce manual work and repetitive follow-ups.
- **Personalised Experience:** Deliver relevant offers and timely reminders.
- **Smarter Decisions:** Turn customer data into actionable insights.
- **Affordable AI:** Make intelligent automation accessible to small merchants.

Overall Impact: More sales. Stronger customer relationships. Less manual work. Smarter business growth.

Business Model

Component	Key offering
Freemium	Basic customer intelligence
Growth Subscription	Predictive insights and follow-ups
Pro Subscription	Multi-agent automation and advanced analytics
AI Usage Add-ons	Additional AI processing and actions
Messaging Add-ons	WhatsApp and SMS usage
Integration Services	POS, payment and commerce integrations
Enterprise Solutions	Custom workflows and APIs

Component	Key offering
Partnership Revenue	Retail platforms and fintech partnerships

Proposed pricing: Starter – Free | Growth – ₹299/month | Pro – ₹799/month | Enterprise – Custom.
